Introduction to Neural Networks, Spring 2017, Prof. K. Y. Huang

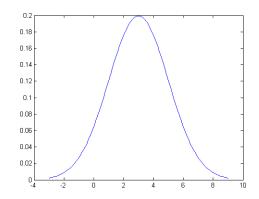

Project #1: Plot Data (Matlab Exercise)

何時給: 2017/2/16. 何時交: 2017/3/23.

遲交不收,自己做,抄襲0分。

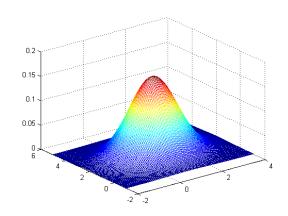

(1) Given 1-d Gaussian function, draw it. (Mean 與 variance 自訂)

(例如: Mean $(\mu) = 3$, variance $(\sigma^2) = 4$, μ -3 $\sigma \le x$ -coordinate range $\le \mu$ +3 σ .)

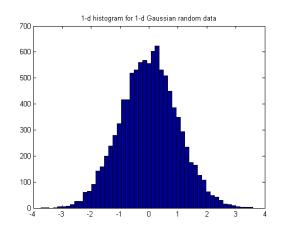

(2) Given 2-d Gaussian function, draw it. (Mean 與 covariance matrix 自訂) (例如: Mean (μ) = [1; 2], covariance matrix (Σ) = [1 0; 0 1], μ -3 σ \leq x-coordinate

range $\leq \mu + 3\sigma$.)

(3) Call 1-d Gaussian random data and plot 1-d histogram.

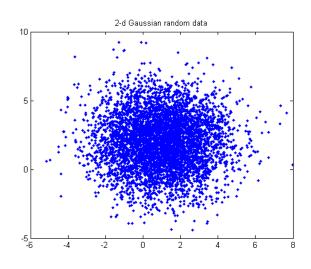

(例如: Mean $(\mu) = 0$, variance $(\sigma^2) = 1$.)

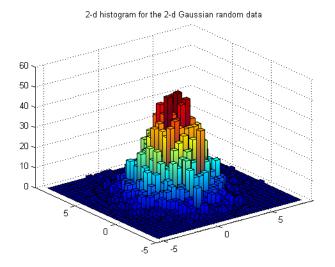

(4) Call 2-d Gaussian random data. 點在 2-d space 上。 Plot 2-d histogram.

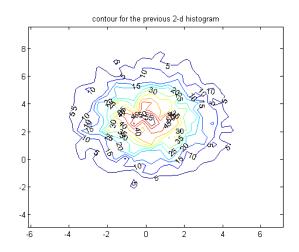

(例如: Mean (μ) = [1; 2], covariance matrix (Σ) = [3 0; 0 4])

Hint: 透過 mvnrnd 函數產生 2 維高斯亂數,並使用 plot 函數點出 2-d 高斯亂數,最後使用 hist3 函數畫出 2-d histogram。

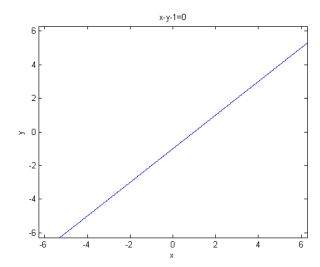

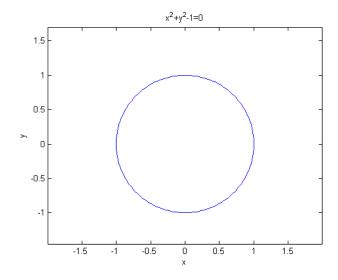

(5) 承(4),在 2-d histogram 上畫等高線圖。 (Matlab 進階有畫由點畫等高線圖的 function name.)

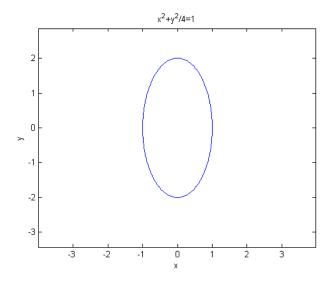

(6) Plot line x-y=1.

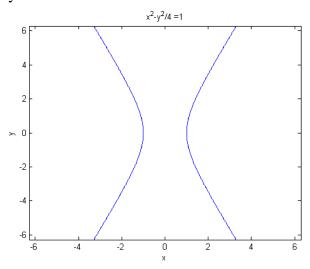

(7) Plot circle $x^2+y^2=1$.

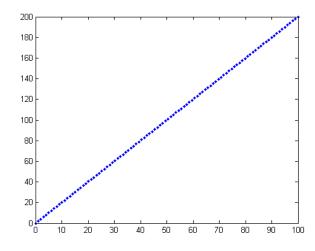

(8) Plot ellipse $x^2+y^2/4 = 1$.

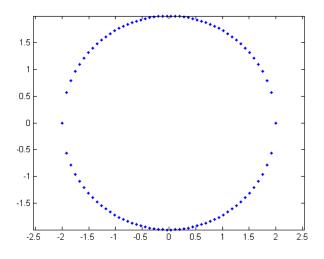

(9) Plot hyperbola $x^2-y^2/4=1$.

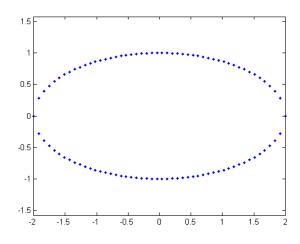

(10) Generate data of line 2x-y=0 and plot. (產生 100 點,畫在 2-d 上)

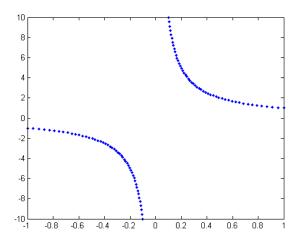

(11) Generate data of circle $x^2+y^2=4$ and plot. (產生 100 點,畫在 2-d 上)

(12) Generate data of ellipse $x^2/4+y^2=1$ and plot. (產生 100 點,畫在 2-d 上)

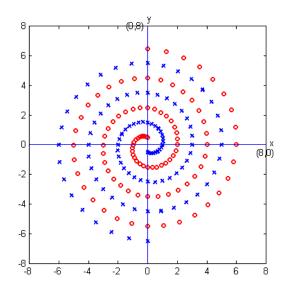

(13) Generate data of hyperbola xy=1 and plot. (產生 100 點,畫在 2-d 上)

(14) Plot two spirals.

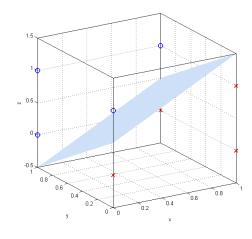

$$(x_i, y_i) = (r_i \sin \theta_i, r_i \cos \theta_i) \in C_1$$
, where $r_i = 6.5 \times \frac{(104 - i)}{104}$, $\theta_i = \frac{\pi}{16}i$, $i = 0,1,...,96$

$$(x_j, y_j) = (-r_j \sin \theta_j, -r_j \cos \theta_j) \in C_2$$
, where $r_j = 6.5 \times \frac{(104 - j)}{104}$, $\theta_j = \frac{\pi}{16} j$, $j = 0,1,...,96$

(15) Plot 8 points in the three dimensional space, and the plane z = x - y + 0.5 that can separate these two classes.

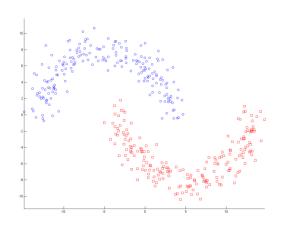

X	0	0	1	1	0	1	1	0
у	1	0	0	0	0	1	1	1
Z	1	0	0	1	1	0	1	0
Class	1	2	2	2	1	2	1	1

(16) Plot double moon problem:

自己設計程式產生 data,二個 moons 的距離可以拉近或遠離。

Blue points are for class 1, and red points belong to class 2.

- 17. Given 5 sine function with different periods (different frequencies),利用動畫顯示這 5 個 sine functions。週期為 $T_0, T_0/2, ..., T_0/5$. T_0 與 function 取樣的點數自訂。 動畫顯示的快慢由自己決定或以 10 秒、20 秒、及 30 秒作動畫顯示。
- 18. Design a uniform random number generator. (必須做分析,如何設計?)
 - (a) Given a seed number (SEED) and number of data (RANDX), generate random values between 0.0 and 1.0.
 - (b) Extend to the values between a lower bound and an upper bound.
- 19. Design a Gaussian (normal) random number generator. (必須做分析,如何設計?)
 - (a) Given a seed number (SEED) and number of data (RANDX), generate random values with mean 0 and standard deviation 1, i.e., N(0, 1).
 - (b) Modify to mean m and standard deviation σ , i.e., $N(m, \sigma^2)$.

*** 只寫一個主程式,亦即沒有 function,包含各個子題,命名為 main.m。

要交的東西:

- (1) 在指定日的上課前,交紙本報告 (18 及 19 的分析,全部的結果,討論,參考文獻,及 Matlab programs).
- (2) 將要交紙本報告的 doc file 及分開的 MATLAB program file 建成一個 directory (資料夾),壓縮成 zip 檔後,上傳到 e3 system.

Directory name 的名稱: Proj#1_姓名_NN_2017Spring。

Office Hours:

Prof. Huang: 星期二 3:30-4:25PM, 四 4:30-5:25PM, 或約時間。

分機: 56620.
